Corporate Philosophy of the Kewpie Group

“RAKU-GYOU-KAI-ETSU”

Corporate Motto

Guided by the corporate philosophy that draws on its Corporate Motto and Principles, Kewpie has put in place the Group Policies that embody the Group’s commitment to earning the highest degree of trust from its stakeholders, including customers, shareholders, business partners, employees, and society, who provide the underlying strength for all of its business activities. In ensuring that each and every member of the Group fully understands and carries out the spirit of the Group Policies we are better positioned to further enhance our transparency as a company and to garner the trust of customers.

The Kewpie Group Policies

Words to remember: “The world is fairer than you imagine”

Toichiro Nakashima (Founder) was deeply impressed by the following words that he encountered in his younger days: “It may seem that the lazy and sly get ahead in the world. However, the world is actually a place where the people who strive in sincerity and steadfastness are the winners in the long run.” He held the belief that “the world is fairer than you imagine.” When faced with difficulties, Toichiro would consider what was true and what was right, and always strove for originality and ingenuity. Throughout his life he continued to show gratitude toward all those who helped him. These words inherited from Toichiro were included in the Kewpie Group corporate principles up to 1992.

We aim to be a group contributing to the food culture and health of the world through “great taste, empathy, and uniqueness.”

The Kewpie Group Policies

Guided by the corporate philosophy that draws on its Corporate Motto and Principles, Kewpie has put in place the Group Policies that embody the Group’s commitment to earning the highest degree of trust from its stakeholders, including customers, shareholders, business partners, employees, and society, who provide the underlying strength for all of its business activities. In ensuring that each and every member of the Group fully understands and carries out the spirit of the Group Policies we are better positioned to further enhance our transparency as a company and to garner the trust of customers.

Code of Ethics

Our Ideal

We drive growth of the company and the individual by continuing to accept new challenges and also by learning from previous lessons. We respect the individuality and aspirations for growth of each and every one of our employees around the world, allowing them to perform to their full potential.

Code of Conduct

We rise to meet the trust placed in us by our customers, preserving the environment. We appreciate the blessings of nature and promote a sustainable harmony with local communities and society as a whole.

We accept new challenges and also by learning from previous lessons. We appreciate the blessings of nature and promote a sustainable harmony with local communities and society as a whole.

Accept New Challenges

We drive growth of the company and the individual by continuing to accept new challenges and also by learning from previous lessons.

Put Product Quality First

We rise to meet the trust placed in us by our customers, preserving the environment. We appreciate the blessings of nature and promote a sustainable harmony with local communities and society as a whole.

Promote Diversity

We respect the individuality and aspirations for growth of each and every one of our employees around the world, allowing them to perform to their full potential.

Contribute to Society through Nutrition Education

We contribute to society through the advancement of nutritional education, promoting healthy lifestyle choices and working in harmony with local communities and society as a whole.

Protect the Earth’s Environment

We appreciate the blessings of nature and promote a sustainable society for future generations by effectively utilizing resources and preserving the environment.

Accept New Challenges

We drive growth of the company and the individual by continuing to accept new challenges and also by learning from previous lessons.

Put Product Quality First

We rise to meet the trust placed in us by our customers, preserving the environment. We appreciate the blessings of nature and promote a sustainable harmony with local communities and society as a whole.

Accept New Challenges

We drive growth of the company and the individual by continuing to accept new challenges and also by learning from previous lessons.
Message from the President

For the next 100 years, we aim to achieve sustainable growth by strengthening our management foundations and contributing to the resolution of social issues.

Osamu Chonan
Representative Director, President and Chief Executive Officer
Kewpie Corporation

The Origin of Kewpie's Strengths

The Kewpie Group celebrated its 100th anniversary in 2019. Over the past year, we have expressed our gratitude to customers, shareholders, business partners, and other stakeholders for supporting us through various events.

For many people, I believe mayonnaise is the first thing that springs to mind at the mention of Kewpie. That can be traced back to 1935, when the Company began to manufacture and sell Kewpie Mayonnaise inspired by founder Toichiro Nakashima’s ambition “to help improve the physique and health of Japanese people by making delicious, nutritious mayonnaise so widely available that it became a daily necessity.” Kewpie chose a mayonnaise formula that is a necessity.” Kewpie chose a mayonnaise formula that is a difficult method to use to create mayonnaise. Since then, we have struggled to make use of the remaining egg whites in a wide range of applications, including cakes, kamaboko (a fish paste product), and bakery items. That established the base of today’s Egg Business. In addition to mayonnaise, we developed and nurtured various products for the first time in Japan, including dressings and sauces.

In meeting various requests from companies that produce salad dishes, we have expanded our technological expertise and our range of applications into condiments centered on mayonnaise and developed potato salads and other delicatessen foods. Striving for originality and ingenuity has become a defining feature of our group.

I believe another core asset is our diverse sales channels and ability to engage in the well-balanced delivery of menu items including home-cooked meals, ready-made foods, and restaurants. In addition to using mayonnaise and dressings in the home (home-cooked meals), we provide many of our products for use in restaurants and hotels (restaurants). Moreover, our group delivers salads and delicatessen foods (ready-made foods) sold in supermarkets and other places. We have strengths in our accumulated originality and ingenuity, many top-in-class and unique products, and connections with customers with a variety of dietary scenes.

Future Direction

Amid accelerating change in the environment surrounding the food business, the range of fields in which the Group can play an active role has been expanding. In Japan, people’s lifestyles and values are diversifying, the time they spend in supermarkets is becoming shorter, and interest in food and cooking skills appears to be declining.

Until now, the Kewpie Group has been promoting expansion of each different business through its own sales channels particular to each. Now, however, we are pursuing a new approach under which the three core Group businesses—the Condiments and Processed Foods Business, the Salad and Delicatessen Business, and the Egg Business—mutilate utilize sales channels that have proven to be a strength for each and fuse technologies and information. To promote initiatives that take a comprehensive view of the entire group with these efforts, we have newly established a Marketing Division spanning all the businesses and development functions. We are responding to changes in the operating environment by utilizing various sales channels to deliver products that meet customer needs.

Specifically, salads that use mayonnaise and dressings (Condiments and Processed Foods Business) are a menu that contributes greatly to healthy eating habits from the viewpoint of vegetable consumption. By combining them with eggs containing high-quality proteins (Egg Business), we aim to expand the businesses of our group by playing a leading role rather than a supporting role in dietary scenes. While pursuing sustainable growth in Japan, we intend to further accelerate business expansion overseas, particularly in China and Southeast Asia.

In China, we are building a fourth plant, in Guangzhou, to strengthen our development in the heavily populated southern part of the country. In the Chinese market, awareness of salads and healthy dietary lifestyles is growing in tandem with the improving freshness of raw vegetables. The recognition rate of mayonnaise is 88%, but the rate of household usage is only about 17% (2019 research by Kewpie). The data shows we have lots of opportunity to expand our business, and I believe, offers great potential for the Kewpie Group to play a new role in the country’s food culture.

In Southeast Asia, including Thailand, Malaysia, Vietnam, Indonesia, and the Philippines, we are carefully conducting market research into the different food cultures in each country. We are proposing a ‘Japanese-style’ food culture through the development of products tailored to each market.

Contributing to the Resolution of Social Issues through ESG Initiatives

I have mentioned our founder’s ambition about mayonnaise, and as the Kewpie Group today we aim to contribute to the food culture and health of the world through “great taste, empathy, and uniqueness.” With that in mind, we have identified the material issues that we should address while referring to the United Nations Sustainable Development Goals (SDGs). We have designated the following four CSR material issues: “Contribution to extending healthy life expectancy,” “Mental and physical health support for children,” “Efficient use of resources and sustainable procurement,” and “Reduction of CO2 emissions (response to climate change).” In addition, we designate “Promotion of diversity” as the platform of our group sustainable growth strategy.

We are working on each of the specific sustainability goals.

One of the social issues related to health in Japan is that there is a gap of about 10 years between average life expectancy and average healthy life expectancy (which is the period in which a person can enjoy life without any limitations in day-to-day activities resulting from health problems). We believe that closing this gap will not only lead to smiling faces for as many people as possible, but also contribute to curbing medical costs, which is a major issue for the government. As the Kewpie Group, we intend to contribute to the extension of healthy life expectancy by supporting delicious and well-balanced dietary lifestyles with salads and eggs.

With regard to the social problem of labor shortages, we are promoting our own initiatives involving collaboration between humans and technologies. One example here is rationalizing inspection technology through the use of artificial intelligence (AI) with a view to realizing efficient and healthy factories. We are not keeping these examples of the use of AI to ourselves. Rather, we are actively promoting greater use of AI through the food industry as a whole, thereby helping to alleviate industry-wide labor shortages while also contributing to food safety and reliability. In the field of logistics, we have started joint transportation on trunk lines with different industries to improve loading efficiency. We are also seeking to reduce CO2 emissions by facilitating a modal shift that entails a combination of long-haul trucks as well as railways and ships.

In addition to efforts from these environmental (E) and social (S) perspectives, we are working to reinforce governance (G) as part of our management policy. In terms of our corporate governance systems, we have already established a Management Advisory Board and a Nomination and Remuneration Committee, and we have been working to strengthen our risk management system. The Kewpie Group is characterized by its ability to harness the diverse attributes of each Group company in its management through mutual cooperation. To make optimal use of this structure, we set out the basic philosophy and the roles and responsibilities of each organization within the Group in January 2020 in the “Fundamental Policy for Group Management.”

Kewpie Group in the Years to Come

FY2020 marks the 101st year since our establishment. With our Long-Term Business Plan launched in FY2019, we have embarked on the first stage of our 2030 Vision, as we take the first steps to realizing Our Ideal. Financial targets for FY2019 were not achieved, and the outlook for FY2020 is not bright. However, we are determined to press ahead with the policies set out in our FY2019-FY2021 Medium-Term Business Plan: “Promoting our products, centering on three businesses, as integral parts of people’s daily meals in Japan,” “Accelerating overseas business expansion, particularly in China and Southeast Asia,” and “Strengthening business foundations for better adaptability to environmental changes.”

The global spread of the COVID-19 infection remains an enormous concern for society as a whole and for the Japanese and global economies. We also expect some considerable impact on the Kewpie Group, and we will do our utmost to prevent the spread of infection as a socially responsible company while striving to supply food products to fulfill our mission as a manufacturer of food products.

Let me end by offering one of my favorite sayings: “Fine trees come from deep feeder roots.” I take this to mean that good trees can long survive storms without falling if they are supported by roots that invisibly spread deep in the ground. In the management of our group, I believe that the roots are the Kewpie Group Philosophy.

In philosophical training sessions conducted annually with employees in Japan and overseas led by our directors, we examine the choices the Company has made to overcome major crises in the past and the thinking that lay behind those choices. In FY2019, we held “100th anniversary meetings” to review our 100-year history with employees at a total of 153 sites in Japan and overseas, and I am confident that the Kewpie Group’s strengths will continue to be based on this immutable philosophy.

Along with the Group writing on the basis of shared philosophy, we will continue to grow for the next 100 years by actively incorporating new perspectives for the future.
Kewpie Group Business Activities

Our founder, Toichiro Nakashima, spent about three years in the 1910s in the United Kingdom and the United States as an overseas intern for what was then called the Japan Department of Agriculture and Commerce. That was when he first encountered orange marmalade and mayonnaise.

The Great Kanto Earthquake hit the Tokyo-Yokohama area in 1923. During the subsequent period of reconstruction, Mr. Nakashima saw the country’s way of life changing, with one example being the Westernization of female students’ clothing. He sensed that change would come to the Japanese diet as well, and in 1925 the Company launched Kewpie Mayonnaise, a highly nutritious mayonnaise made using only egg yolks. The Company began to make use of egg whites, a by-product, and eventually egg yolks and whole eggs, processing and selling them as products, which gave rise to the Egg Business.

In 1932, the Company launched Aohata Marmalade. By developing and applying the processing of various ingredients and canning technology, the Company was able to develop products such as jams, pasta sauces, baby foods, and nursing care foods. Moreover, in response to social changes, such as the increase in women in the workplace, single-person households, and the shift to nuclear households, the Company began to provide delicatessen foods and packaged salads with the idea of having people eat fresh salads easily without wastage. This is how we developed today’s Salad and Delicatessen Business.

Ever since its establishment in 1919 as Shokuhin Kogyo Co., Ltd. (now Kewpie Corporation), the Kewpie Group has adhered to its values of continuing to be faithful to the hallmarks of honesty and integrity that handles food items.

We will continue to take up new challenges for another 100 years by passing on our founding thought and striving to contribute to the world’s food culture and health.

### Summary

- **Condiments and Processed Foods Business**
  - We were the first in Japan to produce and sell mayonnaise and dressings. While refining our cooking knowledge and technologies, we have produced and sold products ahead of their time, such as pasta sauces for prepared foods, baby foods, and nursing care foods. Having expanded operations both domestically and abroad, we sell food products for every dietary scene, such as the meal at home, restaurants, boxed lunches, and delicatessen foods.

- **Salad and Delicatessen**
  - We meet diverse needs for food amid changing lifestyles through delicatessen foods prepared in tune with local tastes, such as with freshly packaged salads (cut vegetables for households). This business delivers products from its production centers across the country, mainly to supermarkets.

- **Egg**
  - We have created technologies that take advantage of the unique traits of egg, and manufacture and market those products based on such technology. In addition to liquid eggs and frozen eggs used as ingredients in a variety of foods, we widely available supplies of processed egg products such as omelets and egg salads to convenience stores and restaurant chains.

- **Fruit Solution**
  - Through the production of orange marmalade, the root of our business today, we have refined our ability to procure fruit materials as well as our fruit processing and preservation technologies, the latter to maintain deliciousness for a long time. In addition to jams and spreads, we engage in the sale of processed fruit preparations for industry use.

- **Fine Chemicals**
  - This business was created from the idea of extracting and using the active ingredients in eggs. Turning the power of eggs into value, we have commercialized lecithin, lysozyme, eggshell membrane and other products. Broadening our scope, the business sells hyaluronic acid, which is produced from chicken’s comb extract and fermentation technologies, as an ingredient for pharmaceuticals, foods, and cosmetics.

- **Distribution**
  - Group companies that specialize in foodstuff distribution offer logistics services in four different temperature zones (room, refrigerated, and frozen) in order to preserve food quality and freshness, depending on the nature of the food items. The business provides comprehensive services ranging from ingredient transportation with marine vessels and trucks to distribution to supermarkets, restaurants, and convenience stores.
Kewpie Group Value Creation Process

The business domains and areas in which the Group operates are wide-ranging, both in Japan and overseas. In continuing to hone techniques and proposal capabilities while pursuing deliciousness endlessly, Kewpie presents its ideas for a variety of culinary scenarios, in the entire range of its activities, from product development to delivery to its customers. Moreover, it is the blessings of nature that underpin our business activities. Our fervent hope is to remain an environmentally conscious group through sincere endeavors including the use of food resources and conservation of the environment and to carry forward a sustainable society to the next generation.

All Group members will continue to accept, learn from one another and share wisdom, tackling head on a changing global environment and social issues in empathy with the corporate philosophy. We aim to be a group that contributes to the food culture and health of the world through “great taste, empathy, and uniqueness.”

Strengths of the Kewpie Group

- A brand with a high degree of consumer confidence
- The No.1* level of consumer confidence in Japan
- Kewpie captured No. 1 in Nikkei Research Inc.’s “Brand Strategy Survey 2019” consumer category

Diverse human resources are playing an active role in and outside of Japan, in empathy with the Kewpie Group philosophy

- 15,000 employees (98 consolidated subsidiaries in 10 business development countries)
- Providing full opportunities for each and every Group employee to leverage their potential

Product supply capabilities that meet diverse needs

- Ability to think and solve on our own at production sites
- Acquisition of Food Safety System Certification approved by the Global Food Safety Initiative (GFSI) including FSSC 22000, at 82 operating sites
- Product development capable of supporting a wide range of temperature zones and categories
- A procurement network for primary ingredients (eggs, edible oils, cabbage, and others)

Diverse sales channels in and outside of Japan

- Addressing the entirety of food needs for home-cooked meals, ready-made foods, and restaurants, in the domestic and overseas markets
- Japan’s largest foodstuff distribution network accommodating four different temperature zones

Diverse sales channels in and outside of Japan

- Addressing the entirety of food needs for home-cooked meals, ready-made foods, and restaurants, in the domestic and overseas markets
- Japan’s largest foodstuff distribution network accommodating four different temperature zones

Changes to the External Environment and Social Issues

- Lifestyle diversification
- High economic growth and expanding consumer markets in developing countries
- Ties with different industries
- Rapid technological innovation
- Changes to social structures such as the super-aged society
- Increasing risk of climate change and destruction of the natural environment
- The declining working population in Japan

Value Creation Story 1
Contribution to Extension of a Healthy Life Expectancy with the Value of Salads and Eggs

Social Issue

In 2018, Japan's average lifespan was 87.32 years for women and 81.25 years for men. Although women in Japan have continued to achieve a new record lifespan for six consecutive years and men for seven consecutive years, as of 2016 the healthy life expectancy, an indication of the age to which individuals can live independently, was 74.79 years for women and 72.14 years for men, far lower than the average. Realizing a longevity society in which the elderly can also live healthy lives has therefore become an issue of national proportions from the perspectives of both improving the quality of life and reducing the social security burden.

Kewpie’s Challenge and Approach

We know that 70% of the factors behind the need for nursing care are related to dietary lifestyles. Moreover, it is now clear that the three pillars of “Nutrition (dietary balance, oral function),” “Physical Activity maintenance of body function and physical strength,” and “Social interaction (human connections, eventful lifestyles, positive feelings)” are also important for realizing healthy life expectancy.

In terms of nutrition, key initiatives for maintaining health in middle age should be targeted at the predisposition toward and overweight in fats and carbohydrates, whereas key initiatives for old age should be focused on malnutrition, including protein deficiency. In addition, it is important to balance and sufficiently chew various foods during consumption. By combining salads, which provide vitamins, dietary fiber, and minerals, with eggs, which contain beneficial proteins, we can realize a better nutritional balance in dietary lifestyles.

The Kewpie Group has worked to spread a new dietary lifestyle of consuming vegetables through salad and has grown along with the increasing number of salad menus. While continuing to place importance on mayonnaise and dressings, we also aim to propose abundant, healthy dietary lifestyles by expanding the scope of salads and eggs as a food partner for everyone.

Moreover, based on existing epidemiological studies and research, we have recognized that maintaining connections with society is extremely important for both physical and mental health. We therefore cooperate with local governments to leverage the Kewpie Group’s proposal capabilities while working to solve deeply rooted food-related issues within communities. At the same time, we have also begun moving toward building a frailty prevention industry through industry-academia-government collaboration.

Through these kinds of initiatives and in working to become a leading company for salads and eggs, as raised in the Kewpie Group’s 2030 Vision, over the next 100 years we will continue to track diets throughout the lives of everyone while contributing to the realization of a longevity society in which everyone can live healthy lives.

Katsuya Iijima
Representative Director, President and Chief Executive Corporate Officer
Kewpie Corporation

Frailty Prevention is Essential for Extension of Healthy Life Expectancy

The Role of Corporations in Frailty Prevention

Chonan
Awareness toward frailty seems to have increased recently.

Iijima
In addition to the diagnosis of frailty in the community becoming part of national policy, I think the ease with which the concept of frailty can be accepted by everyone has also been a factor in the spread of its awareness. Frailty is not just about physical decline but also interwines mental aspects, cognitive functioning, and sociability. At the same time, it also refers to a decline in independence. In regard to partial physical decline, as doctors we prescribe medication from a medical standpoint and tell patients to ensure they get enough protein in the diet and walk a lot. But in reality, their involvement in society, for example, with whom they eat, is even more important. Only when there is an approach from both angles will we achieve frailty prevention.

Chonan
I agree completely. We say “conversation is also a feast,” but social involvement and conversations with people are just as important as nutrition and physical activity in preventing frailty.

Iijima
I have seen many cases where elderly persons who normally have difficulty eating will see conversation with others during meals as their main dish and are able to eat their meals more naturally. The nutritional management and physical fitness that we can support as medical practitioners has been discussed in detail as part of frailty prevention, but I feel that it is rather more important for those in government and the industrial world to support the creation of locations where people can enjoy gathering more naturally.

Chonan
How do we stage the enjoyment of going to such places and the enjoyment of meals? This is exactly the role that seems to be demanded of us.

The Effectiveness of Eggs and Vegetables in Frailty Prevention

Chonan
For those elderly who find it difficult to consume large amounts of food as they age, eggs are an ideal food for efficiently consuming protein in small portions. This is something I have recognized through my interactions with Kewpie.

Iijima
During our lectures, we say that people should eat two eggs per day once they are older than 50, but in retrospect I feel we should place more emphasis on providing accurate information regarding the misconceptions that many people have about cholesterol.

As a country with a long life expectancy, Japan has the second highest consumption rate of eggs per capita in the world, but the frequency of making egg dishes at home has decreased. People avoid making hardboiled eggs because they are difficult to peel cleanly and fried eggs because the oil used on the frying pans makes washing up a chore. I feel it is thus important to develop products that recognize these kinds of challenges.

That makes sense. In fact, as one variety of frailty, I have advocated a new way of thinking called “Oral Frailty,” where oral functioning, like chewing and swallowing, has declined. Oral health, which controls ingestion and mastication,* is extremely important. And as small oral declines build up, they can become the starting point for a powerful downward spiral in terms of health. Oral frailty prevents ideal foods with a certain amount of chewiness. And the representative food in this case is naturally vegetables.

Iijima
All age groups do not sufficiently consume the desired amount of 350 grams of vegetables per day, so I think we should propose more diverse ways of eating vegetables.

Chonan
I think that product development for foods, cooking methods, and conveniences that make it easy to put these on the table exemplify today’s lifestyles. And nutrition management that serves as the core of frailty prevention among the elderly requires more than dietary fiber and egg dishes that enable people to consume a good nutritional balance through small portions. It also requires the creation of new values, such as a combination of vegetables that maintain chewing strength.

Iijima
I think that is true. In addition to product development and recipe proposals, we intend to contribute to the extension of healthy life expectancy by broadcasting accurate information.

* Ingestion: Swallowing food; Mastication: Chewing food
Value Creation Story 2
Innovating through Ability to Think and Solve on Our Own x AI

Social Issues and Kewpie Initiatives

With the arrival of a diminishing birthrate and a super aging society, Japan’s population had slid to 126 million as of October 2018, marking eight consecutive years of contraction and its greatest drop in terms of both absolute numbers and rate of decline. Against this backdrop, the ratio of the working-age population (ages 15 to 64) fell to 59.7%, the same level as 1950 and the lowest level among comparable countries, indicating that labor shortages continue to advance. Given the expectation that Japan will face a shrinking labor population as population decline progresses, the Kewpie Group is actively introducing artificial intelligence (AI) as a method of applying next-generation technologies to solve social issues and is pairing our strengths in thinking and solving on our own with AI in order to stimulate activity.

One feature of the Kewpie Group’s AI application is our “human perspective.” Along with utilizing AI as a means of stimulating activity, we are creating various innovations through the strong will of both our manufacturing sites and the Group employees.

The World’s First Practical AI-Based Ingredient Inspection System

In August 2018, we introduced an AI-based ingredient inspection system to the inspection process for ingredients used in baby foods produced at the Kewpie Tozou Plant. Given the nature of baby foods consumed by infants, even if they are safe to eat, black specks of a few micrometers found therein can make users feel uneasy. Until now, Kewpie assigned veteran employees to closely observe hundreds of frozen diced potatoes (peeled potatoes cut into one-centimeter cubes), for example, as they passed in front to sort out defects. In considering whether we could maximize the use of image recognition technology, where AI excels, we began developing an ingredient inspection system in this work in 2016. Instead of teaching the system defective patterns, however, we instead took the opposite approach and taught the system acceptable patterns, thereby dramatically improving accuracy and ultimately leading to the system’s adoption as the world’s first non-annotated machine learning ingredient inspection system.

Currently, the Kewpie Group uses this system at four of its plants in Japan to inspect diced potatoes, chopped carrots, and other ingredients found in baby food and potato salad. The belief of Kewpie’s founder, Toichiro Nakashima, that “good products begin with good ingredients” continues to be passed on to every employee, and serves as the “aspiration” that is shared among our manufacturing sites and has given rise to major strengths. Following installation of the first inspection system, we have made improvements and modifications to realize simpler, more compact operability and evolved the system into a process that is user-friendly for employees.

Our AI-based ingredient inspection system initiative has also been well received by the industrial world, including placing second in the IT Japan Award 2019 (organized by Nikkei XTECH), and receiving the Minister second in the IT Japan Award 2019 (organized by Nikkei). The Kewpie Group has also undertaken many other challenges using AI, and is currently advancing more than 40 projects in multiple departments. We have already begun operating and using systems in practice from 12 of these projects. To realize these kinds of innovations, it is important to have clear goals and aspirations while attracting people who empathize with this aspiration, have the resolve to carry it through, and move forward under mutual relationships of trust. Moreover, when partnering with systems development companies that are well-versed in AI, we do not leave the issue up to them entirely. Instead, we value partnerships with those who empathize with our goals and aspirations, and who are willing to move forward in a spirit of cooperation.

The world’s first non-annotated machine learning ingredient inspection system installed at a manufacturing site.

Participating in the Task Force for Promoting the Construction of Robot Mounting Models

Kewpie participates in the Task Force for Promoting the Construction of Robot Mounting Models, which was launched by the Ministry of Economy, Trade and Industry and New Energy and Industrial Technology Development Organization (NEDO) in October 2019. This task force is focused on three fields facing such increasingly severe issues as labor shortages, namely facility management, restaurant/cafe, and food manufacturing. This task force aims to create process improvement models that utilize robots and that are based on the shared functions derived from the robot-friendly environments being investigated under the assumed revision of existing business processes and facility environments.

The Kewpie Group operates five food businesses that manufacture and sell mayonnaise and other condiments, delicatessen foods, packaged salads, and ingredients and processed foods made from eggs. We also operate the distribution business, but the degree to which robots are deployed in these businesses varies depending on the business and product. Moreover, the food manufacturing industry includes more labor-intensive elements than other industries. For example, the processes used to make delicatessen foods and carry-out boxed lunches for the continuously growing ready-made foods market now need an extremely high number of personnel. Against the backdrop of increasingly severe labor shortages in the future, organizing the various issues regarding business processes at worksites, expanding from individual company issues to industry-wide issues and cooperative issues, and removing the barriers to introducing robots are urgent actions for the entire industry. In working to create process improvement models that utilize robots for 2022, we will continue to undertake this initiative together with the other participating companies.

The Kewpie Group Integrated Report 2020

People Make Innovations, Increase Corporate Value, and Create Customer Value; New Technologies such as AI Serve as a Method

The strength of the Kewpie Group is the robust ability to think and solve on our own that we have built up over the past 100 years. The actors, —newly joining the latest technologies such as AI with this ability in order to make innovations, strengthen corporate value, and create customer value—are people.

Many human resources within the Kewpie Group have overcome the barriers between organizations to undertake the challenge of more than 40 projects that utilize AI, including our ingredient inspection system. And I believe that when they have overcome all difficulties and followed through until the end with resolution, they will have acquired true innovation capability and will become drivers of future revolution.

Although food manufacturers compete against each other in competitive areas, for areas in which industry cooperates, such as safety and reliability, the Kewpie Group is creating and driving a world where companies throughout Japan cooperate and work together in hopes of contributing to a more robust Japanese food industry.

The Kewpie Group Integrated Report 2020
FY2019—FY2021 Medium-Term Business Plan

The Medium-Term Business Plan launched in FY2019 is the first stage of the “Kewpie Group 2030 Vision.” Based on the Company’s Management Policies, this stage will achieve continuous growth in the domestic market and accelerated growth in overseas markets.

FY2019—FY2021 Medium-Term Business Plan

Management Policies

- Realize sustainable growth in Japan by promoting our products, centering on the Condiments and Processed Foods, Salad and Delicatessen, and Egg businesses, as integral parts of people’s daily meals.
- Accelerating overseas business expansion, particularly in China and Southeast Asia.
- Strengthen the business foundation for better adaptability to environmental changes.

Key Indicators

- Operating income ratio of 6.1% or higher
- ROE of 7.5% or higher
- Operating income ratio for the three businesses in Japan of 8.5%
- Sales growth rate in China and Southeast Asia of 10% or higher (average annual growth rate)

Revolution of FY2021 Performance Targets

Performance Targets Revised due to the Need for Strengthening the Domestic Food Businesses

In FY2019, although overseas business performance was almost exactly as planned, due to declining domestic sales of dressing and packaged salad products and increased costs resulting from higher than expected shipping expenses in the food businesses and Distribution Business, business performance targets were revised. We have positioned FY2020 to FY2021 as a transitional period for establishing a stronger base, linking to sustainable growth for FY2022 and beyond.

The Kewpie Group Integrated Report 2020

The Kewpie Group Integrated Report 2020
**Sustainable Growth in Japan**

**Group Expansion through Expanding Dressings and Utilize Markets Representing Kewpie’s Strengths**

Dressings are created to match evolving preferences. This includes, for example, actively incorporating oils that have a sense of healthiness and are enhanced through product development that takes into account needs and trends. In tandem with this, dressings are served with more than just salads. Promoted and nurtured for their versatility, dressings add value to new menu proposals, such as sautéed foods and other dishes.

In addition, we are actively working to achieve growth, remaking products geared toward the fruit and vegetable markets as well as delicatessen markets, that are the specialized domains of the Salad and Delicatessen Business.

**Creating New Demand Through Group Expansion**

Increase in net sales in FY2024 (compared with FY2019)

**Accelerate Growth Overseas**

**Focusing on Expanding Condiments, Particularly in China and Southeast Asia**

Making full use of our menu proposal capabilities and techniques cultivated in Japan, we are creating and popularizing new food cultures through the development of products in line with respective market characteristics while working to expand our business.

In China, we expect to incur one-time costs that result from standardizing product bar codes that differ by area in FY2020. Nonetheless, by strengthening the functions of the controlling company, and bolstering sales capabilities by establishing new sales and marketing bases, we aim to realize steady revenue streams from FY2021.

In Southeast Asia, we are promoting collaboration with Thailand, Malaysia, Vietnam, Indonesia, and the Philippines, and accelerating our efforts to achieve further market penetration.

**Continue to Post a Sales Growth Rate* of 10% or Higher in China and Southeast Asia (Average Annual Growth Rate)**

* Based on local currency

**Growth of Mayonnaise in the Chinese Market**

We aim for further market expansion by revamping packages with a mesh design and standardizing bar codes.

**Global Strategic Product “Deep-roasted Sesame Dressing”**

Deep-roasted Sesame Dressing has gained broad acceptance as a condiment that matches any number of ingredients and menus, and has established a position as the No. 1 dressing in Japan. Through overseas expansion, it has earned a presence in markets around the world, not only in China and Southeast Asia but in the United States and Europe as well, owing to its affinity with local food cultures.

In consideration of making Deep-roasted Sesame Dressing a worldwide product, the Kewpie Group has positioned this as a global strategic product. By advancing proposals that are in tune with the ingredients and food cultures of respective countries, we are working to achieve further market expansion.

**Overseas Expansion of Deep-roasted Sesame Dressing**

* Countries also includes certain areas

**Expanding Applications Beyond Salads**

We are expanding the product applications by matching it with ingredients while promoting its use with sautéed foods, noodles, and other dishes.

**Recipes for Kewpie Deep-roasted Sesame Dressing**

- Spread of salad and vegetable dishes
- A wider array of applications
- Combinations with local ingredients and condiments

**20th Anniversary of Deep-roasted Sesame Dressing Release**

Since its market launch in 2000, Deep-roasted Sesame Dressing has gained broad acceptance as a condiment that matches any number of ingredients and menus. This year marks its 20th year as we continue to further its spread around the world.

**Noodles**

- Longevity noodles
- Boiled gyoza
- Japanese dumplings

**Meats**

- Boiled gyoza
- Boiled gyoza (Japanese dumplings)

**Sauces**

- U.S. Kewpie food truck
- Kewpie vending machine

**Salads**

- Hot-pot dishes
- Japanese tofu steak
- Raw vegetable salads
- Sautéed foods

**Soups**

- Seafood (Japanese dumplings)

**Other**

- Combinations with local ingredients and condiments

**Overseas Production Sites**

- Europe: 17 countries
- Asia and Oceania: 18 countries
- North and Central America: 2 countries
- South America: 1 country
- Africa: 5 countries
- Middle East: 2 countries
- Outside of Japan: 44 countries worldwide

**From sites in and outside of Japan, expansion to**

**Asian Markets**

- China
- Vietnam
- Thailand
- Malaysia
- Indonesia
- Philippines

**Other Markets**

- U.S. - Kewpie Food Truck
- Mexico - Kewpie vending machine
- Central America - Kewpie vending machine

**Recipes for Kewpie Deep-roasted Sesame Dressing**

- Combinations with local ingredients and condiments

**Expanding Markets**

- China: On-site product display
- Vietnam: Billboard advertisement

**Growth of Mayonnaise in the Chinese Market**

We aim for further market expansion by revamping packages with a mesh design and standardizing bar codes.

- **Sales** ¥50.0 billion
- **Net sales targets for China and Southeast Asia (FY2024)**
  - **China** ¥33.0 billion
  - **Southeast Asia** ¥17.0 billion
  - **Market share** ¥17.0 billion

**Growth of Mayonnaise in the Vietnamese Market**

We aim for further market expansion by revamping packages with a mesh design and standardizing bar codes.

- **Sales** ¥50.0 billion
- **Net sales targets for Vietnam (FY2024)**
  - **Sales** ¥33.0 billion

**Growth of Mayonnaise in the Thai Market**

We aim for further market expansion by revamping packages with a mesh design and standardizing bar codes.

- **Sales** ¥50.0 billion
- **Net sales targets for Thailand (FY2024)**
  - **Sales** ¥33.0 billion

**Growth of Mayonnaise in the Indonesian Market**

We aim for further market expansion by revamping packages with a mesh design and standardizing bar codes.

- **Sales** ¥50.0 billion
- **Net sales targets for Indonesia (FY2024)**
  - **Sales** ¥33.0 billion

**Growth of Mayonnaise in the Philippine Market**

We aim for further market expansion by revamping packages with a mesh design and standardizing bar codes.

- **Sales** ¥50.0 billion
- **Net sales targets for Philippines (FY2024)**
  - **Sales** ¥33.0 billion

**Growth of Mayonnaise in the Malaysian Market**

We aim for further market expansion by revamping packages with a mesh design and standardizing bar codes.

- **Sales** ¥50.0 billion
- **Net sales targets for Malaysia (FY2024)**
  - **Sales** ¥33.0 billion

**Growth of Mayonnaise in the Indonesian Market**

We aim for further market expansion by revamping packages with a mesh design and standardizing bar codes.

- **Sales** ¥50.0 billion
- **Net sales targets for Indonesia (FY2024)**
  - **Sales** ¥33.0 billion
Strengthen the Business Foundation to Achieve Medium- to Long-Term Growth

We will focus on providing support to the distribution and production processes within the supply chain that support our daily business activities and will promote initiatives that contribute to the Group's medium- to long-term growth.

Distribution

In addition to the shortage of drivers, which is becoming increasingly more severe, the logistics sector has been confronted over the past few years by not only higher distribution costs and calls to improve the working environment but also the emergence of social issues, such as the need to lower CO₂ emissions. Under these circumstances, it appears likely that transport capacity will fall short of total demand by about 30% in the next seven to eight years. Adverse weather conditions and repeated natural disasters are also working to impair the distribution function. It is particularly difficult to amass sufficient human resources for the distribution of processed food, especially in light of the enormous amount of manual work required in the loading and unloading of cargo, as well as the time spent waiting during deliveries.

To overcome this logistics crisis, the Group believes it is necessary to not only enact measures within the Company but also to work in close cooperation with other industry players and government authorities.

K.S.R. Corporation, a Group company in charge of the distribution business, operates a substantial number of bases in Japan, including warehouses that maintain the constant temperatures essential for food products. In addition to handling the intricate delivery networks and trunk routes connecting the major bases of operation, the business boasts 40 years of know-how and experience in conducting joint transport operations. We are promoting a variety of initiatives in the field, including collaborative efforts with other companies, as shown in the following two examples.

Example 1: Joint Trunk-Line Transport Operations by Companies in Three Different Industries

The Kewpie Group, Lion Corporation, and Japan Pallet Rental Corporation have been cooperating in trunk-line transportation using shipping and joint trucks since August 2018. The three companies that previously handled the transportation of products and equipment by arranging trucks are now focusing on establishing a stable transport system by creating a cross-industry and cross-business sustainable logistics network. Under this collaboration, we have been able to increase the loading ratio of daily goods, food, and empty pallets transported between the Kanto, Shikoku, and Kyushu regions by adjusting shipment volumes and shipping dates, and by using trailers on a fixed schedule. This has contributed to the ratio of loaded trips to total trips exceeding 99%, which in turn has resulted in the more effective use of vehicles, improved working conditions for drivers, reduced man-hours thanks to the use of ferries, and a modal shift to ships. The arrangement has also contributed to a 62% plus reduction in CO₂ emissions compared to individual company emissions on a combined basis prior to collaboration, with the companies receiving strong praise for creating an environmentally friendly distribution system.

Kewpie’s efforts in this area were recognized with the Minister of Land, Infrastructure, Transport and Tourism’s Award for Excellence in the FY2018 Green Logistics Commendation Program, with Japan Pallet Rental Corporation and others. The award is given to businesses showing a special achievement in the building of sustainable logistics systems that reduce the impact on the environment and improve productivity in logistics.

Example 2: SCM Reconstruction through Two-Day Delivery and Doing Away with Inspections upon Delivery

The Kewpie Group is working to simplify and improve planning in its operational processes while upgrading its conventional business practices in distribution, manufacturing, and retailing. We launched new systems that reduce the impact on the environment and improve productivity in logistics.

Kewpie, Sunratel, and Japan Pallet Rental Corporation launched joint transport operations using trucks and ships between the Kansai and Kyushu regions in July 2019. By combining heavier products, such as mayonnaise and dressings, with lighter products such as toothpaste and toothbrushes, the companies are able to more effectively utilize container space and transport more cargo.

We believe that improving infrastructure and the working environment in the logistics field is important for the growth of companies. As we accelerate our efforts, we intend to advance over the three-year period extending through 2021 will result in a turning point in the field of processed food logistics.

Production

Launch of Kansai Kewport, which Consolidates Chilled Processed Production in Western Japan

In January 2020, we completed construction of Kansai Kewport, an integrated production, sales, and distribution base in Itami City, Hyogo Prefecture, which is responsible for the production of chilled processed products in western Japan. The sequential launch of production began in March of the same year. At Kansai Kewport, which is located on the site of the Kewpie Itami Plant, egg breaking, in which eggs are cracked and converted into a liquid, and egg processing, in which the egg liquid is converted into a thick creamlike., have been conducted in separate buildings to date, though the facility aims to consolidate the processes to just one location around August 2023, which would create a production system that encompasses the entire process from egg breaking to processing. In addition to streamlining the production of processed egg products and consolidating the sales and development divisions of group companies in the area, we aim to accelerate product development and improve our proposal capabilities in western Japan in order to better respond to the diversifying needs of our customers.

After examining the successful efforts of our office, we are working to shorten office meeting times and facilitate quicker communication by reducing the amount of space dedicated to document management and establishing stand-up meeting tables and booths for meetings with only a few participants. We are also creating dedicated areas for individual work. We will continue to enact a variety of measures with the goal of promoting the generation of synergies.

The Kewpie Group Integrated Report 2020

The Kewpie Group Integrated Report 2020
Putting the Kewpie Group Philosophy into Practice ~“Mudadori” Activities Using the Originality and Ingenuity of Employees~

The Kewpie Group’s long-standing corporate motto (Raku-Gyou-Kai-Etsu in Japanese) centers on the idea that people who have the same ambitions enjoy working together, endure struggles together, and rejoice together. “Mudadori” activities (work improvement activities by employees to heighten efficiency and productivity) are one example of putting this philosophy into practice at the worksite. We asked Hidemi Kato, who has acted as a project leader since the launch of these activities and who now serves as the manager of the Kewpie Kobe Plant, for his thoughts on the background and importance of these activities.

“Mudadori” Activities That Draw Out the Intelligence and Creativity of Each and Every Participant

“Mudadori” activities are work improvement activities involving the participation of all employees and place a high value on the intelligence and wisdom of each on-site individual. These activities are based on the idea of eliminating waste in the various operations conducted in the workplace, though they are not focused on cost reductions alone. The characters in the Japanese phrase can also be read as “the adoption of many dreams” and the activities themselves are aimed at having employees realize their dreams, that is the ideal situation, by working together and drawing forth the wisdom of each individual so that they can better think and act on their own.

There was an incident in May 2003 in which a contaminant was accidentally mixed into the mayonnaise manufactured at our mainstay Sengawa Plant. At the time, the facility was shifting from the mass production of only a few items to limited production of a larger number of items, which contributed to not only an increased volume of work but also increased complexity in operations. At the time, it was felt that most employees were being overwhelmed by the day-to-day responsibilities and a culture had evolved in which when even the smallest of problems appeared at the worksite, it was considered only natural to continue operations following the thinking, directions, and orders of the person in charge. Even before the incident, Tadashi Katayama, who is now a director, was in charge of the Sengawa Plant at the time, felt the need to shift to a corporate culture in which each employee on the site thought for him/herself and proposed ideas for improvement. With this in mind and with the goal of preventing any more product quality incidents, we launched the first “Mudadori” activities in September 2003. At first, there was some opposition according to a lack of understanding and whether it was a good idea to speak out in regard to not only one’s own workplace but also other workplaces as well as in regard to accepting what you are told and revising the rules that have been followed to date. However, the first signs of changes within the Sengawa Plant began to appear just one year after the launch of the activities.

Drawing Out the Ability of Employees to Think for Themselves at the Worksite

The first improvement made involved moving the location of the clock. Process management meant keeping a record of each and every time a particular job or operation was started. However, this resulted in employees always having to turn around and check the clocks, so we changed the position of the clock to a more visible location so that employees could always see it. While this might seem trivial, we never focused on the physical activity of turning around to look at the clock prior to the introduction of this “Mudadori” activity, so it never occurred to us to change its position.

These activities were conducted with the idea of first trying change, but if the previous version proved better, not being afraid to revert back to the original. This resulted in ideas continuously flowing from these worksites, with these ideas eventually leading to concrete and measurable improvements, including lighter workloads, shorter processing times, and reduced complaints and incidents.

We are now at the point where we are able to give a presentation of “Mudadori” activities that have been undertaken by our employees, including those at Group companies. Having been told from the beginning that it would not last if it failed to generate enjoyment, we have kept in mind the importance of recognizing each other’s achievements in a fun and relaxed atmosphere when holding the announcement.

During the announcements, some of the employees have been moved to tears by the fact that their ideas and efforts have been recognized by those around them. Of course, praise for subordinates also bring happiness to their managers. There have been times when speakers mentioning their appreciation for the opportunity to give each and every employee their turn in the spotlight brought tears to the entire forum. When witnessing this, I felt like I had truly come to understand the feeling behind the Raku-Gyou-Kai-Etsu concept, and that through these activities we have reaffirmed Kewpie’s corporate philosophy. I believe this is one of the reasons “Mudadori” activities have been so easily accepted and spread so completely throughout the Company.

The Sengawa Plant around 2015 (close-up and full-side view)

Activities Based on the Kewpie Group Philosophy Spread Completely throughout the Company

We are now implementing “Mudadori” activities at each plant in the production division, including those operated by group companies. While the standardization of production facilities might indeed be important for manufacturers, we believe the strength of the Group stems from the ability of each plant to make the most of the intelligence of its employees as it seeks to implement innovative improvements.

We are also using the “Mudadori” concept to improve operational efficiency in indirect divisions and to develop new technologies. One example of this is the state-of-the-art production line at the Kobe Plant, a key mayonnaise and dressings production plant where operations were launched in 2016. As shown in the figures below and to the right, the stabilization of the mayonnaise production line was achieved by placing the mayonnaise bottle in a small plastic cup on a conveyor belt, which carried it through the filling process. We launched our technology development efforts in this process with the aim of eliminating the wasted effort spent washing thousands of these cups on a repeated basis every few days, and as a result we were able to eliminate the need for these plastic cups at the Kobe Plant, where bottles arriving in bulk are now grabbed individually by a crane and secured to a machine, where they are then carried through the filling process (see the figures below and to the left).

We believe that the true value of each facility can be found not in the state-of-the-art equipment itself but rather in the people who create, construct, and maintain that equipment. With this in mind, the purpose of “Mudadori” activities is not only to reduce costs but also to use the time saved by eliminating waste to create new and better jobs and to improve the quality of all our people, jobs, and products. I believe it is vitally important to continue devising initiatives that allow our employees to work enthusiastically in jobs they find genuinely rewarding.

Previous production line in which mayonnaise bottles were transported in plastic cups

Casting edge production line at the Kobe Plant

We believe that the true value of each facility can be found not in the state-of-the-art equipment itself but rather in the people who create, construct, and maintain that equipment. With this in mind, the purpose of “Mudadori” activities is not only to reduce costs but also to use the time saved by eliminating waste to create new and better jobs and to improve the quality of all our people, jobs, and products. I believe it is vitally important to continue devising initiatives that allow our employees to work enthusiastically in jobs they find genuinely rewarding.
ESG Initiatives

Strengthen the Business Foundation for Better Adaptability to Environmental Changes

Our society has been evolving toward more rewarding lifestyles and greater convenience. In the meantime, due to the diversification of lifestyles and changes in the environment, a variety of issues have surfaced and are beginning to have a significant impact on the global environment.

Appreciating the blessings of nature, the Kewpie Group has been engaged in environmental activities for many years with the idea of making the most of the world’s limited resources. In recent years, however, global-scale issues, including the risks from climate change, food loss, and marine plastic pollution, have manifested themselves one after another. Not only devising initiatives on an individual company basis but also in cooperation with our supply chain, we will contribute to the achievement of universal goals, such as the Paris Agreement and SDGs.

Based on our desire to deliver the joy and pleasure of food as well as a vibrant and healthy dietary lifestyle, we have also been proposing foods suited to a variety of dietary scenarios. As lifestyles and values will further diversify in the years to come, we will contribute to the realization of a society in which people can live healthily, while standing closer to the dietary lifestyles of individuals throughout their lives.

In this way, amid the social environments and markets that will be undergoing dynamic change, we are aiming to become a group in which both employees and the Company as a whole grow by engaging in the promotion of diversity and the active participation of a diverse range of talented people who empathize with our corporate philosophy.

Having inherited founder Toichiro Nakashima’s spirit of “contributing to society through healthier dietary lifestyles,” we will cooperate with our stakeholders to solve social issues and improve sustainability as a part of efforts to contribute to the achievement of both a sustainable society and sustainable growth for the Group.

Sustainability Targets

~Aiming to Achieve Our 2030 Vision~

The sustainability targets serve to clarify the initiatives the Kewpie Group will undertake to attain sustained growth in both social and corporate value. They are divided into five themes designated as “material issues for sustainability.”

Management is working to achieve these sustainability targets while also being guided by performance targets as its financial indicators. By achieving both at the same time, we will be able to realize the Kewpie Group 2030 Vision, our long-term vision.

Material Issues for Sustainability

With the aim of achieving sustainability, while referring to the SDGs, we analyzed and extracted risks and opportunities in the value chain with regard to the social issues that the Group must tackle through its business. In 2018, we identified Material Issues for Sustainability that the Group should prioritize by evaluating the levels of expectations from stakeholders and the impact of the Group on society for each of these social issues. In assessing materiality, we refer to GRI, the international standard for sustainability, ISO 26000, SASB, and each type of ESG evaluation and largely reflect their ideas in the Kewpie Group 2030 Vision, our long-term vision.

Sustainability Promotion System

Chaired by the director in charge of sustainability, the Sustainability Committee promotes the formulation of policies and plans as well as initiatives toward the achievement of the sustainability goals. Committee meetings are held twice a year.

While studying them in subcommittees and cooperative projects, we are working to install and establish the targets of and initiatives in each of the five material issues within the Group.

By cooperating with the Risk Management Committee to reflect identified major risks in material issues, we are promoting the actual strengthening of the business foundation for better adaptability to environmental changes.

Kewpie Group’s Initiatives for Diversity

The Kewpie Group believes that the promotion of diversity is vital as a foundation for sustainable growth. Our aim is to be a group where both people and companies can achieve growth by employing diverse human resources who are able to play an active role, and empathize with our corporate philosophy.

Here, we discuss the Group’s stance on diversity together with Director and Executive Corporate Officer Nobuo Inoue and outside Audit & Supervisory Board Member Emiko Takeishi, who offers wide-ranging insights on personnel systems and labor policy.

**Drawing Attention to Diversity from Two Perspectives**

**Takishi**
There is an increasing number of companies that are taking diversity from their management strategy and applying it to their human resources strategy. This initiative stems from the two opposing perspectives of “defense” and “offense.” Defense reflects the need to deal with a diverse range of issues including lost competitiveness resulting from an inability to keep up with environmental change or the loss of consumers’ trust due to a governance structure that lacks strong checking functions. Offense, on the other hand, reflects the need to lack different types of human resources or new ideas to innovations when attempting to expand business based on non-traditional standards.

**Inoue**
About “defense,” I really feel that the risks surrounding companies are becoming more diverse and complex. This includes the COVID-19 infection that confronts us today. Considering how we deal with this unprecedented crisis, it will certainly be difficult without having diversity on our side. Just how we approach change is another issue. Here, we must think about, and acquire certain skills that differ from those that currently exist in our company. In terms of “offense,” motivations for customer consumption and purchasing, food scenarios and other aspects are becoming increasingly diverse. Against this backdrop, just how does the Kewpie Group broaden its future? In order to think about it, various viewpoints are indispensable.

**The Essence of Diversity**

**Takishi**
Diversity in organizations is essential, but looking at it from another perspective we see cases where this is what causes a weakened sense of unity and a greater tendency to shy out of control. It is tremendously important to have available a range of opinions, but to bind them all together to make a single decision means, more importantly, a return to the basics of what it is that a company values, and to hammer out a conclusion from there. It is incredibly important to place value on the core values of an organization and to ensure that they are shared with employees. Conversely, as an organization becomes more diverse, human resources who are unable to share in core values will not become an effective force, no matter how exceptional their talent may be. A key point is whether a company is able to have employees buy in to the corporate philosophy upon which it places value.

**Inoue**
The common values of the Kewpie Group are as set forth in our corporate philosophy (stated on inside front cover), and under the premise of valuing them as our main focus, our aim is to “contribute to the food culture and health of the world through great taste, empathy, and uniqueness,” centering on salads and eggs. To bring this to fruition, we utilize our diverse strengths and multi-perspectives, which I believe, is the goal of our diversity.

**Takishi**
The Kewpie Group has a culture of listening intently, and seriously accepting and responding to the opinions of others, perhaps because we all have an awareness that is highly homogeneous. You may hear the phrase “diversity and inclusion,” but to expand upon diversity means to have the stance where you seriously accept various opinions. It is also important to have an atmosphere where people can offer differing opinions and feel at ease in that they know there will be no repudiation. My feeling is the Kewpie Group has an extremely good culture and climate based on a solid grounding of diversity.

**Inoue**
Going too far with homogeneity will weaken an organization and hinder medium-to-long-term growth. While continuing to place importance on core values, you have to make sure that you don’t settle there and stop thinking.

**Initiatives for Diversity at the Kewpie Group**

**Takishi**
Since FY2016, when initiatives toward diversity started to really take off, my sense is that considerable change has arrived. When I first became involved in Kewpie management in 2015, we could discuss diversity, but my impression was that while understood, it was not considered an issue of direct or personal application to the Company.

**Inoue**
While I am not certain that in the early days there was an understanding of diversity, there was still distance from where we should have been. The Kewpie Group places great importance on its Corporate Motto and Principles as these will continue to be immutable. However, how should we balance these together with diversity? There was a period when I was going through trial and error. At the time I heard the opinion that “Kewpie should be able to further advance diversity for the very reason that its Corporate Motto and Principles are on such solid ground as the basis for its thinking.” That gave me a strong sense of encouragement. When there is such a different range of values, it could be interpreted that there is an anything-goes attitude toward diversity. For the very reason that the foundation of thinking is solid, the Kewpie Group can achieve its own unique form of diversity. That is how I have come to think.

The past several years since we started our initiatives on diversity, things have changed within the Company in that there has come to be a keen awareness about the importance of diversity. Among the sustainability targets announced in FY2019, we defined the promotion of diversity as a foundation for the Group’s growth strategy, which made it possible to reaffirm this common awareness.

**Takishi**
Perhaps it is because there is a recognition of the issue that women are still not playing a sufficient role that I have come to see a mechanism that works to deliberately comprehend women’s points of view in management. There has been a marked increase in opportunities for women to speak up in all kinds of meetings, regardless of their age or position.

**The consideration of diversity, I believe, also leads to a culture of studying. In doing that, employees raise their capabilities. At the same time, achieving personal growth can be tied to the overall growth of a company.**

**Takishi**
It is also effective to get into the habit of thinking. More than just considering a certain topic’s consenting opinions, you can also think of opposing arguments. For example, if you make a rule that in meetings dissenting opinions must be presented, with no exceptions, this will facilitate a lively discussion and differing opinions can be assessed. For organizations, evaluations are an important point, so it is also important to have the diversity that comes with different perspectives of evaluation.

**Inoue**
That is true. I would like to see diversity evolve based on the invigoration that comes with so many different ways of approaching things.

**Takishi**
Everyone is different, and given this, while one individual can exercise their strengths, that same person’s weak points can be helped by someone else, thus making for a stronger unit overall. An easier way to understand this is with the image of building a company’s foundation not as a formed-block wall but rather as the making of a base composed of stones where each has their own individual shape.

**Raising the Capacity to Empathize with Society**

**Takishi**
Companies that gain the future acceptance of society will clearly tackle the issues that society faces, and in that way be capable of giving a firm response to such issues. Equally important to responding to customers’ needs by mayonnaise and dressing product lines, demands will arise to seriously address such issues as the elimination of plastics and animal welfare. Those human resources that can properly pick up and understand what societal issues can be solved through business will, I believe, become the future treasures of the Kewpie Group.

**Inoue**
Human resources that possess multiple skills jointly contribute their knowledge and generate the ability to empathize among companies and society. This will also lead to the Group’s raison d’être. High reliability with regard to products and corporate activities is a given, but there is so much potential for those who work, along with a variety of ways to become involved. This will mean exciting growth for both our people and companies. I would like to see us as a company that has both of these qualities.
Main Initiatives

- **Three Pillars for Lifelong Health**
For the purpose of extending healthy life expectancy, we are promoting collaboration with universities, local governments, and other organizations to bring about a shift in attitude and behavior, promoting healthy eating and physical activity, and increasing social participation. (Co-creation)

- **Supporting Well-balanced Dietary Lifestyles with Delicious Menus of Salads and Eggs**
A well-balanced dietary lifestyle is important for nutrition. Among the Company’s strengths, eggs are effective in preventing frailty, and the dietary fiber and vitamins in salads are effective in preventing lifestyle-related diseases. Keeping in mind that getting into the eating habit of steadily eating salads will also help improve people's health, we will continue to expand on these proposals in our products and services in the years to come.

- **Food Education Activities That Bring Us Closer to Each Generation**
- **Open Kitchen (Factory Tours)**
Began as a part of a social studies tour in 1961, the factory tours now attract about 70,000 visitors a year. We convey our approach to food production and the importance of eating vegetables at five factories throughout Japan.
- **Mayo Terrace (Tour Facility)**
A tour facility that teaches the importance of eating healthy and provides enjoyment to people of all ages.
- **Mayonnaise Class (Given On-site at Schools by Visiting Employees)**
Through hands-on experience with and lectures about mayonnaise, we convey the importance of vegetable intake and the enjoyment of eating. In FY2019, employees acting as teachers held lectures at 315 elementary schools, and the cumulative total number of participants since 2002 reached 105,000.
- **Lecture Meetings on Food Themes**
Conducted with the aim of providing information on dietary lifestyles and health.

- **Kewpie Mirai Tamago Foundation**
Established in 2017, the Kewpie Mirai Tamago Foundation undertakes activities that provide assistance to the organizations devoted to the creation of spaces where children can eat at home through food, such as food education activities and Children’s Cafeterias operated by these organizations. We have established a program to provide assistance, from FY2020, to organizations that carry out food education activities to extend healthy life expectancy.

ESG Initiatives
Social and Environmental Initiatives

**Contribution to Extending Healthy Life Expectancy**

Our founder, Toichiro Nakashima, launched Kewpie Mayonnaise in 1925 with the ambition to help improve the physique and health of the Japanese people by spreading the use of highly nutritious mayonnaise condiments throughout Japan. Since then, we have been launching new products to cater to lifestyle diversification and changes in society and the environment, such as dietary lifestyles and the falling birthrate and aging society, and that take into consideration the food cultures and health of our customers.

**Sustainability Targets**

As a leading company in salads and eggs, we will
- Contribute to achieving a vegetable intake target of 350 grams per day
- Promote a boost in egg consumption in order to contribute to increasing protein intake

**Topics**

**Supporting Health from Physical Activity and Food Culture Aspects**

**Food Culture and Health Promotion Project**
We are advancing our collaboration with Central Sports Co., Ltd., which shares the idea that combining three elements—nutrition, physical activity and social participation—are important for lifelong health. Having received requests from sports gym users and instructors who had said that they wanted to easily and effectively ingest protein, we are holding study sessions on food and providing recipes and health information to users.

**Voices**

**Food Culture and Health**

*Yuka Nitta, Food Culture and Health Promotion Project Management Promotion Division, Kewpie Corporation*

We are recommending dietary lifestyles inspired in combination with salads and eggs. We are demonstrating new possibilities in linking the nutrition produced by the Company and the physical activity provided by Central Sports Co., Ltd.

**Voices**

**Food Education**

*Takayuki Watanabe, ESG Division, Kewpie Corporation*

Families with weaning children have a variety of concerns with regard to food. Our aim is for them to participate in the program while bringing smiles to the faces of parents and children alike.

**Mental and Physical Health Support for Children**

With the aim of realizing healthy dietary lifestyles, we are engaging in food education activities that convey the importance and enjoyment of food. In contrast, the social issues that arise include children’s lack of knowledge and experience, the isolation of parents while raising children, and child poverty. Through food education activities that bring us closer to each generation, we will work to realize healthy dietary lifestyles for children and support their futures.

**Sustainability Targets**

- **Indicator**

  - FY2019 Actual
  - FY2021 Target
  - FY2030 Target

  - Number of raising children through our Group’s food education activities (cumulative total from FY2018)
  - 101,000
  - 200,000 or higher
  - 1.0 million or higher

**Main Initiatives**

- **Realization of Healthy Lifestyles by Generation-Specific Food Education**
- **Intakes/Preschoolers**
- **Mayonnaise class**
- **School/Children**
- **Support for creating places where children can eat at home through food culture**
- **Youth/Adults**
- **Lecture meetings on food themes**

View of an event at a Children’s Cafeteria that receives assistance from the foundation.
ESG Initiatives

Effective Use of Resources and Sustainable Procurement —

In addition to the deliciousness and safety of our products, as a food manufacturer we think it is necessary to take responsible measures across the entire supply chain—from the procurement of raw ingredients and resources to production/sales and the recycling of waste—so that our customers can enjoy peace of mind.

Sustainability Targets

<td>△29.9%</td>
<td>△25.0% or higher</td>
<td>△50.0% or higher</td>
</tr>
</tbody>
</table>

Main Initiatives

● Effective Use of Resources

Use of Unused Portions of Vegetables

In response to the expansion of our salad and delicatessen business, we are working to effectively utilize the unused portions of vegetables (such as the outer leaves, cores, and skins) that cannot be used in our products, while aiming for more advanced uses such as by extending expiration dates and displaying just the month and year. The need to reduce food loss is shared with our supply chain, and efforts to reduce product waste are gathering pace.

Effective Use of Eggshells

Beginning in 1956, when eggshells were first used in soil conditioner, it has been reported that fertilizing rice paddies with eggshells stabilizes yields in bad weather and improves rice quality.

Reduction of Product Waste

We are working to reduce food loss through cooperation in production, sales, and logistics, such as by extending expiration dates and displaying just the month and year. The need to reduce food loss is shared with our supply chain, and efforts to reduce product waste are gathering pace.

● Sustainable Procurement

Having established the Kewpie Group Fundamental Policy for Sustainable Procurement in 2018, we promote procurement that takes into account the environment and human rights. In the case of palm oil, having joined the Roundtable on Sustainable Palm Oil (RSPO) in 2018, we are engaging in the procurement of sustainable palm oil.

Reduction of CO₂ Emissions (Response to Climate Change)

The Paris Agreement on Climate Change was adopted in 2015 and required that companies take more responsible actions toward the realization of a non-carbon society. The Kewpie Group is working toward the achievement of its sustainability target of a 20% reduction in CO₂ emissions (compared with FY2013) in FY2030.

<td>CO₂ Emissions (compared with FY2013)</td>
<td>△7.2%</td>
<td>△7.5% or higher</td>
<td>△20.0% or higher</td>
</tr>
</tbody>
</table>

Main Initiatives

● Reduction of CO₂ Emissions

In addition to improving efficiency in manufacturing processes and installing energy-saving equipment throughout the Group, to reduce CO₂ emissions we are promoting the use of renewable energy through newly constructed solar power generation facilities.

In logistics, we are actively promoting the modal shift from long-haul trucks to railroad and ship transport as well as joint collaboration on transportation with manufacturers from different industries.

In our offices, we are working to optimize energy use. By utilizing AI at Sengawa Kawpore, where the Group’s head office complex is located, we have reduced the annual energy consumption for air conditioners by approximately 15%.

We also encourage the calculation of CO₂ emissions across the entire supply chain and promote their reduction.

● Responses to Climate Change Risk

Having included climate change risk among the environmental risks to which the Risk Management Committee should be responding from FY2020, the Company has commenced the analysis of scenarios based on recommendations by the Task Force on Climate-Related Financial Disclosures (TCFD). We identify the climate change risks of the Group and work to reduce the risks and create business opportunities.

To realize a non-carbon society, the Committee is also considering policies to address the issue of plastics in FY2019 and, as one of those policies, working to reduce the use of petroleum-derived plastics. As a specific measure, we adopted recycled plastic for use in salad dressing packaging.

Topics

Achievement of 100% Effective Utilization of Unused Portions of Vegetables

Enshu Plant, Salad Club, Inc.

To effectively utilize the unused portions, such as the outer leaves and cores of cabbage and lettuce, which are the main ingredients of packaged salads, we have introduced technology that turns them into feed for dairy cattle by means of lactic acid fermentation developed by the Kewpie Group. In 2019, we introduced the technology for turning them into fertilizer inside our factories by means of fermentation decomposition equipment and realized the effective utilization of all the unused portions of vegetables.

Voices

Resource Recycling

Kenjiro Yamamoto

Enshu Plant Manager

Salad Club, Inc.

We make good quality fertilizer from the unused portions of vegetables and supply them to contract farmers in the vicinity of the plant. Promoting recycling-based agriculture, by which vegetables are purchased as raw materials from the contract farmers, we value the connections with the local community.

Topics

Introduction of Renewable Energy

Akishima operating site, Shunsai Deli Co., Ltd./ KEWPIE (THAILAND) CO., LTD.

Following the Kewpie Corporation’s Goka Plant, the second solar panel facility for in-house electricity needs in Japan commenced operations at the Akishima operating site of Shunsai Deli Co., Ltd., in April 2020. Overseas, we also installed a solar power generation facility at a production site in Thailand to generate approximately 2 MW of renewable energy. The Kewpie Group will continue its switch to renewable energy in the years to come.

Voices

Reduction of CO₂ Emissions

Shunsuke Nozaki

KEWPIE (THAILAND) CO., LTD.

The local production and consumption of energy from solar power generation is more efficient than the production and supply of electricity generated from fossil fuels. Believing that by promoting the reduction of CO₂ emissions they can contribute to the prevention of global warming, all the employees here are actively engaged.
In the course of improving corporate governance, the Group respects the Kewpie Group Philosophy and Policies and continually considers the maximum benefit for various stakeholders. The Group is also striving to construct an appropriate corporate governance system that leverages its uniqueness based on these results.

The Kewpie Group will continue aiming to contribute to the food culture and health of the world. To achieve this goal, the Group will personally question what is true, value the opinions of each individual employee engaged in continuing medium- to long-term growth with the final goal of corporate governance.

In addition, the Group’s basic concept and framework for corporate governance has been compiled in the “Corporate Governance Guidelines.”

Corporate Governance System

The Group is selecting a company with an Audit & Supervisory Board. The Nomination and Remuneration Committee has been established as a consultation committee for the Board of Directors, and the Management Advisory Board has been established as an advisory body for the Representative Director, President and CEO. Through these initiatives, the Group is strengthening its management, monitoring, and execution functions.

For the Development of Kewpie Group Management

The Kewpie Group continues to propose ideas for food that are suited to a variety of culinary scenes around the world to achieve a healthy and abundant dietary lifestyle. Then, in order to realize the “Kewpie Group 2030 Vision” and ultimately “Our Ideal,” we believe it is important that each business and company making up the Group as a whole exhibits its diverse individuality, and that it is important to proactively engage in group management while cooperating with each other.

Accordingly, the Fundamental Policy for Group Management was announced in January 2020 that clearly stated the basic principles for implementing group management and the roles and responsibilities of each organization within the Group. By following the Fundamental Policy, the Kewpie Group as a whole will achieve its goal of building even stronger cooperative relationships through common recognition of group management.

Initiatives with Outside Board Members

As social issues become increasingly diversified and complex, we must raise the meaning of the existence of the Kewpie Group from the perspective of various stakeholders. To achieve this goal, the Group will make efforts to enrich opportunities for dialogue and cooperation with outside Board members.

Status of Outside Board Members

Ms. Kumahira was appointed as a new outside auditor starting in February 2020 due to her business management experience in Japan and overseas and advanced knowledge of organizational innovation and leadership development.

---

Note: For information about the independence criteria for outside Board members, see the Corporate Governance Guidelines.
Working to Improve Corporate Governance

● Opportunities for Dialogue and Cooperation with Outside Board Members

In addition to deliberations by the Board of Directors, we establish various opportunities for dialogue between outside Board members and employees through business site visits and participation in meetings other than the Board of Directors. To produce mutual recognition, the timing, themes, participants, locations, and processes of opportunities for dialogue are adjusted with consideration for the inclinations of outside Board members.

Main Themes for Opinion Exchange at the Board of Directors

2018
Domestic Research Business Plan, ESG Issues, diversity, and group R&D strategy
2019
Group management, distribution of management resources, diversity, and risk management
2020
Realization of a sustainable society (set aside in 2021)
Group management, reverse opinion, diversity, and sustainability

Nomination and Remuneration Committee

This advisory body was established to increase objectivity, validity, and transparency related to the form of the Board of Directors, the method of nominations and remuneration of Board members, and other related matters. The committee is made up of a minimum of five members (consisting of the Company’s directors and corporate auditors), at least half of whom must be outside Board members satisfying the independence criteria. Committee members are elected by a resolution of the Board of Directors, and the committee chairmanship is selected by a resolution of the Nomination and Remuneration Committee itself from among its members who are outside director members. The chairperson also serves as the chairman for meetings.

Management Advisory Board

The Management Advisory Board has been set up as an advisory body to the Company’s Representative Director, President and Chief Executive Corporate Officer. Participants in the Board meetings (two regular meetings per year, plus special meetings as necessary) consist of outside members (currently consisting of four experts), and the Representative Director, President and Chief Executive Corporate Officer. Other directors may also participate as necessary, depending on the agenda. The Company receives advice and proposals from this Board for the maintenance and improvement of the sound, fair, and transparent management of the Group, which it takes into account in decision-making.

Main Agenda of the FY2019 Regular Meetings

Inside Director Remuneration Composition

<table>
<thead>
<tr>
<th>Monthly remuneration (fixed)</th>
<th>Bonuses (Outruding)</th>
</tr>
</thead>
<tbody>
<tr>
<td>32% in total</td>
<td></td>
</tr>
</tbody>
</table>

Calculation Method for Monthly Remuneration

- Inside Director: Flat rate with an additional bonus for representatives
- Corporate officers: Set at an appropriate level for each rank (company president, senior executive corporate officer, executive corporate officer, senior corporate officer) with consideration for factors such as the management environment outside directors and corporate auditors: Fixed amount

Calculation Method for Bonuses

- The bonus amount is calculated according to the rank of the inside directors and corporate officers, using consolidated operating income and the goal attainment levels of the individual and the division for which they are responsible as a benchmark
- The Company can increase or decrease the bonus amount paid for the final fiscal year of the Medium-Term Business Plan, depending on progress made in achieving the performance goals previously set for the final fiscal year on an individual basis

Remuneration of Board Members

The remuneration paid to directors is in the form of monthly remuneration and bonuses. The monthly remuneration is decided separate according to each director’s status and is limited within the scope of the remuneration limit resolved at the General Meeting of Shareholders. Bonuses are not paid to the outside directors.

The remuneration paid to corporate auditors is in the form of monthly remuneration only. The individual remuneration amounts are decided through negotiation with corporate auditors within the scope of the audit remuneration limit resolved at the General Meeting of Shareholders.

The Kewpie Group Integrated Report 2020
The Kewpie Group Integrated Report 2020
Working to Improve Corporate Governance

Risk Management and Its Framework

The Group considers the effects on its brand and business model, that are the source and foundation of revenue, and extracts factors that could inhibit the overseas expansion needed for accelerating growth. These factors are then evaluated in terms of the extent of their impact and their degree of controllability, and the risk items for which countermeasures should be implemented are selected. In addition, individual risk is continuously monitored by each department in charge, and company-wide risks are provided to the Risk Management Committee, and this committee in turn comprehensively manages these risks by evaluating, prioritizing, and determining handling measures. The director supervising risk management also reports information such as the company-wide risk evaluations and the handling policies and conditions to the Board of Directors regularly.
